

Process & Decision Documentation

Project/Assignment Decisions

I edited the Week 3 example to create a new game called Create Your Pet. The game allows you to choose which animal you'd like, its eye colour and its fur colour to create your perfect pet. I added buttons and changed the corresponding labels, added new .js pages to account for the new screens and updated the instructions, start and final screens. GenAI was used to help edit and add to the code however, the original idea was created by me.

GenAI Documentation

If GenAI was used (keep each response as brief as possible):

Date Used: January 29, 2026

Tool Disclosure: ChatGPT 5

Purpose of Use: GenAI was used to help with code edits and debugging.

Summary of Interaction: Based on the prompt given, the concept for the new game and its requirements and the starter code, GenAI gave sections of the code to change to fit my instructions. When I ran into problems, it helped to identify areas to change and offered debugging help.

Human Decision Point(s): I came up with the new game idea myself. When a certain error kept occurring, I re-iterated with the tool to help it identify what the problem was. I did this by including the full text of code. I also decided to keep certain parts of the original code it told me to change based on what I wanted the outcome to perform.

Integrity & Verification Note: I checked it for accuracy by testing the code snippets in GitHub to see if it preformed like it intended to as well as compared it to certain parts of the original code to see if the structure was similar.

Scope of GenAI Use: GenAI did not contribute to the Start file.

Limitations or Misfires: The tool ran into trouble when trying to debug a certain part of the game. It took multiple prompts and iterations for it to identify what was the issue and how to fix it.

Summary of Process (Human + Tool)

- I tested the code it gave before re-prompting the tool to make changes
- Moments of uncertainty and failure included why a portion of code wasn't working. This meant I had to go back and forth with ChatGPT to try and solve the error

Decision Points & Trade-offs

- When giving options on how to correct a bug, I made the decision to follow a certain option rather than another
- This choice was made based on the current resources I had available to me and how easy/difficult it would be for the change to be implemented

Verification & Judgement

- I tested the code to see if it performed as intended and made adjustment and reiterations as needed

Limitations, Dead Ends, or Open Questions

Note anything that:

- At times the code GenAI was giving didn't solve the issues I was having.
- This caused me to have to re-iterate what needed to be done and ask the tool to fix one section at a time to avoid confusion
